

L0 Journey Check

A private reflection on J01. Orientation only: no score, no rating and no capability-state claim.

Asset ID	EYW-JRN-J01-L0-001 v1.0
Journey	J01 Make AI Adoption Safe
Role	L0 orientation and reflection (canonical L0; accepted rendition included in RP-PUBLIC)
Classification	PUBLIC
Release profiles	All launch profiles: RP-PUBLIC, RP-REGISTERED, RP-SELF
Publisher	Simon Owen / EmPOWER Your World
Date	26 September 2026
Controlling sources	Narrative v3.5.2 (SRC-015); L0 source v1.0 (SRC-019); assessment contract (SRC-020)
Contract	Specification v3.3 §§6.1, 9.2, 11; Narrative v3.5.2 §§3, 12, 15; L0 authority ceiling

Before you start

L0 is orientation and reflection only. It makes no capability-state claim, produces no score, and is not a diagnosis, benchmark or assurance.

Nothing here is collected. Your notes stay with you unless you choose to share them. This is not measured capability, maturity, assurance, accreditation, delivery authority or benchmarking.

How to use it

1. Decide what you are thinking about: your whole organisation, one team, or one use case. Keep it in mind; you do not need to write it down.
2. Read each question and write a short private note. There are no right answers and no scale.
3. Notice where you were least sure. Uncertainty is useful information, not a failure.
4. Use the last two questions to decide whether J01 fits and which neutral route is proportionate now.

Reflection

Area	Reflection question	Private note
Front Door	Where do AI use cases enter, and what bypasses that route?	
Risk Size	How big is this, and would two reviewers agree?	

Area	Reflection question	Private note
Control Floor	Which controls are required, and who owns them?	
Living Loop	What changes after launch, and what wakes governance up?	
Evidence Chain	If proof were requested tomorrow, where would it come from?	
Response Net	Who declares an AI surprise, and who owns the first decision?	
Fit	Is J01 genuinely the relevant problem for what I am thinking about?	
Action	Which neutral route is proportionate now?	

Neutral routes

Route	When it fits	What to record
Sustain	Sufficient state is present and the main need is to maintain, monitor or renew it.	Record the persistence or review trigger.
Deepen J01	J01 remains the right problem frame and a material gap or uncertainty remains.	Record the gap, evidence and intended outcome.
Another Journey	A different admitted problem is materially more important or better matched.	State why. Do not default merely because J01 evidence is incomplete.
No further action	No proportionate action is justified now.	Record the reason, owner and reconsideration trigger.
Poor fit / redirect	J01 is not the right intervention, authority is missing, the need is outside EYW's boundary or a specialist route is required.	Record the safe redirect.

Routing is a human-owned decision based on subject, scope, capability need, evidence, context, urgency, authority and alternatives. No score or weakest area selects the next product.

What this check is and is not

- It is a structured moment of reflection that helps you orient.
- It is not a diagnostic, benchmark, assurance review or maturity assessment.
- It does not produce a capability state. Capability states are used only in L1 self-report, which is a separate registered product, and in separately authorised L2 review, which is deferred.
- It must not be used for employee-performance, redundancy, promotion or disciplinary decisions, or for monitoring anyone.
